# HAWK V-SERIES ANAMORPHICS

An extensive range of high performance scope lenses

The Hawk V-Series line of professional cine lenses was built on a foundation of completely new optical calculations, with the idea that cinematographers coming from the spherical world would appreciate the precision of eleven choices in focal length, rather than the four or five lenses in a standard anamorphic set. The V-Series line extends superior lens quality into very long focal lengths, including an unprecedented 250mm lens. With two zooms and an accompanying 1.4x extender, the V-Series has you covered.

At the other end of the scale, the V-Series lenses deliver dramatic breakthroughs in close focus – down to two feet in the middle range of focal lengths. This virtue is especially welcome for cinematographers shooting 'Scope in tight locations. The V-Series lenses perform flawlessly in strong backlight, with predictable results and no flaring or halos.
